

WORLDINU

WHITEPAPER

ONE WORLD. EVERY INU.

Solana-native community ecosystem

Version 1.0 | September 2026

\$WINU

WorldInu (\$WINU) | One World. Every Inu.

IMPORTANT

This whitepaper describes the current WorldInu vision and development roadmap. It is not an investment contract, a promise of returns, or a guarantee that any planned feature will be delivered on a specific date. The live Solana mint and official project channels are the source of truth for token and launch information.

1. Executive Summary

WorldInu is a Solana-native, community-first ecosystem designed to bring discovery, project identity, information tools and community participation into one recognizable home for the broader Inu culture. The ecosystem is centered around \$WINU and the WorldInu Hub.

The project begins with a simple idea: Inu communities are spread across many tokens, social accounts, launch platforms and data sources. WorldInu aims to make that landscape easier to explore and understand without pretending that any tool can remove crypto risk.

WorldInu is being built in public. The initial focus is a clean project hub and community layer; additional modules such as INU Explorer, INU Passport, INU Scanner and INU Vault are intended to be developed iteratively as the community grows.

PROJECT	WorldInu
TOKEN	\$WINU
NETWORK	Solana
LAUNCH	Pump.fun
SLOGAN	One World. Every Inu.
STATUS	Live / ecosystem in development

2. Mission and Vision

Mission. Create a trusted destination where the Inu ecosystem can be discovered, organized and followed through clear project information, identity tools and community-first utilities.

Vision. Build an open Inuverse where different Inu communities can coexist under one discovery layer while retaining their own identities. WorldInu is not designed to replace individual projects; it is designed to connect them.

3. Design Principles

Information before hype: Present useful project data and context before promotional language.

All Inus welcome: WorldInu is designed as an ecosystem layer, not a single-token gatekeeping club.

Build in public: Ship in stages, communicate what is live versus planned, and avoid presenting prototypes as finished products.

No false safety claims: WorldInu tools may organize signals and public information, but they do not certify that a token or project is safe.

Modular growth: Each product module should be useful on its own and capable of integrating with the rest of the ecosystem.

4. The WorldInu Ecosystem

WorldInu Hub is the public front door. The planned ecosystem is organized around five modules, each serving a distinct role while sharing the same WorldInu identity and information philosophy.

INU Explorer Discovery layer for browsing Inu projects and navigating the wider ecosystem from one hub.	INU Passport Structured project profiles intended to collect key identity details, official links and review status.
INU Scanner An information layer for reviewing token details, project signals and community-submitted information.	INU Vault A future home for ecosystem resources, utilities and other tools as the product matures.
Community The social layer connecting Inu holders, builders, creators and contributors around the WorldInu ecosystem.	\$WINU The community token and launch layer connecting the WorldInu identity to the on-chain ecosystem.

5. \$WINU Token

\$WINU is the official community token associated with WorldInu. It launched on Solana through Pump.fun and serves as the on-chain identity layer for the WorldInu ecosystem.

WorldInu intentionally avoids promising future profits, guaranteed utility, fixed rewards or automatic value creation. As products are built, the project may introduce token-linked access, recognition, participation or ecosystem functions, but any such use will be announced only when the relevant feature is technically live and clearly documented.

OFFICIAL SOLANA MINT / CONTRACT ADDRESS

9w4yMoU9vgsUGdp923Q8T7oGbTzpstj2aEi7vu58pump

SOURCE OF TRUTH

Token supply, holder balances, market activity and other live token data should be verified directly on Solana and the official Pump.fun page. If any document, post or third-party listing conflicts with the on-chain mint, the on-chain record takes precedence.

6. Launch and Technical Foundation

Network. WorldInu launched on Solana. Solana was selected for a fast, low-friction user experience and a strong on-chain community environment.

Launch platform. \$WINU launched through Pump.fun. WorldInu does not claim that a launch platform removes trading, liquidity, smart-contract, market or operational risks.

Website architecture. The public WorldInu Hub is a web application that presents project information, links and the development roadmap. Planned data tools should be designed so that users can distinguish public-source data, community-submitted data and project-provided information.

Security posture. No claim of guaranteed token or project safety is made. Users should independently verify the mint address, transaction details, wallet permissions and destination links before interacting with any crypto asset.

7. Roadmap

The roadmap is directional rather than a promise of dates. Priorities may change based on technical feasibility, community feedback, legal requirements and available resources.

STAGE	OBJECTIVE	STATUS
Phase 1 - Launch	Launch \$WINU on Solana via Pump.fun, publish the WorldInu Hub and establish official communication channels.	LIVE
Phase 2 - Discover	Build INU Explorer and the first version of INU Passport with structured project profiles.	NEXT
Phase 3 - Review	Develop Scanner tools and a stronger Community Hub with clearer project-signal presentation.	BUILD
Phase 4 - Expand	Develop INU Vault utilities and pursue ecosystem partnerships that add genuine product value.	EXPAND
Phase 5 - Multi-chain	Evaluate expansion to additional chains, including Base, HyperEVM or other ecosystems, only when it improves the user experience.	FUTURE

8. Community and Participation

WorldInu is designed to grow through community participation, but participation should be voluntary, transparent and informed. Community members may contribute ideas, project submissions, feedback, educational content and ecosystem discovery without receiving any guarantee of compensation or token appreciation.

The project may introduce recognition systems, contributor programs or community voting mechanisms in the future. Any governance or incentive system should be documented separately before activation, including eligibility, limits and conflict-of-interest rules.

9. Information Integrity

A central design goal of WorldInu is to clearly separate information from endorsement. Listing a project in Explorer, creating a Passport profile or displaying Scanner data does not mean WorldInu guarantees the project, its team, liquidity, code, price behavior or future performance.

- Project-provided information should be labeled as project-provided.
- Community-submitted information should be treated as unverified until reviewed.
- Public-source data should link back to the original source whenever practical.
- Scanner outputs should be presented as signals or observations, not as a certification of safety.
- Material corrections should be reflected publicly when credible evidence is available.

10. Risk Factors

Crypto assets are highly speculative and can lose substantial or all of their value. WorldInu participants should understand that \$WINU and the broader ecosystem may be affected by risks including:

- Market volatility and rapid price changes.
- Liquidity changes and slippage.
- Wallet, phishing, key-management and transaction-signing risks.
- Smart-contract, token-program or third-party platform risk.
- Service outages, API failures and incorrect third-party data.
- Regulatory or legal changes affecting crypto assets or online services.
- Roadmap delays, technical limitations or discontinuation of planned features.
- Community, reputation and moderation risks.

NO FINANCIAL ADVICE

Nothing in this whitepaper, the website, social channels or community should be interpreted as financial, legal, tax or investment advice. Users are responsible for their own research and decisions.

11. Official Links

Use only the official links below. Be cautious of impersonators, look-alike domains and messages requesting seed phrases or private keys.

12. Closing Statement

WorldInu starts with a meme-native identity, but the long-term goal is broader: create a useful, transparent and recognizable home for Inu discovery and community tools. The project will be judged by what it ships, how clearly it communicates, and whether its products become useful to real users.

ONE WORLD. EVERY INU.
